**High Integrity
Engineering Solutions
To Exacting Standards**

Total Operation Under One Roof

The key to McGeoch's engineering solutions is flexibility with all aspects of our operation centred in Birmingham, UK. This provides a complementary route to support the rest of the business and allows all our electrical and electronic equipment to be designed, manufactured, assembled and tested completely 'in-house' and all under one roof.

Design & Engineering Services

McGeoch's legacy of marine electrical design and manufacturing expertise is world renowned, our flexible approach allowing us to develop and build a wide range of equipment from prototype units to fully engineered products using the very latest computer systems. Our Design Department is set up to support this process and has a correspondingly wide range of engineering skills.

Sub-Contract Manufacturing

McGeoch has consistently invested in the very latest state-of-the-art manufacturing equipment including 4th & 5th axis machining centres and water jet cutting. As a result, we are now not only able to fully service our own manufacturing needs but, at the same time, offer a flexible, efficient and cost effective sub-contract manufacturing service as well.

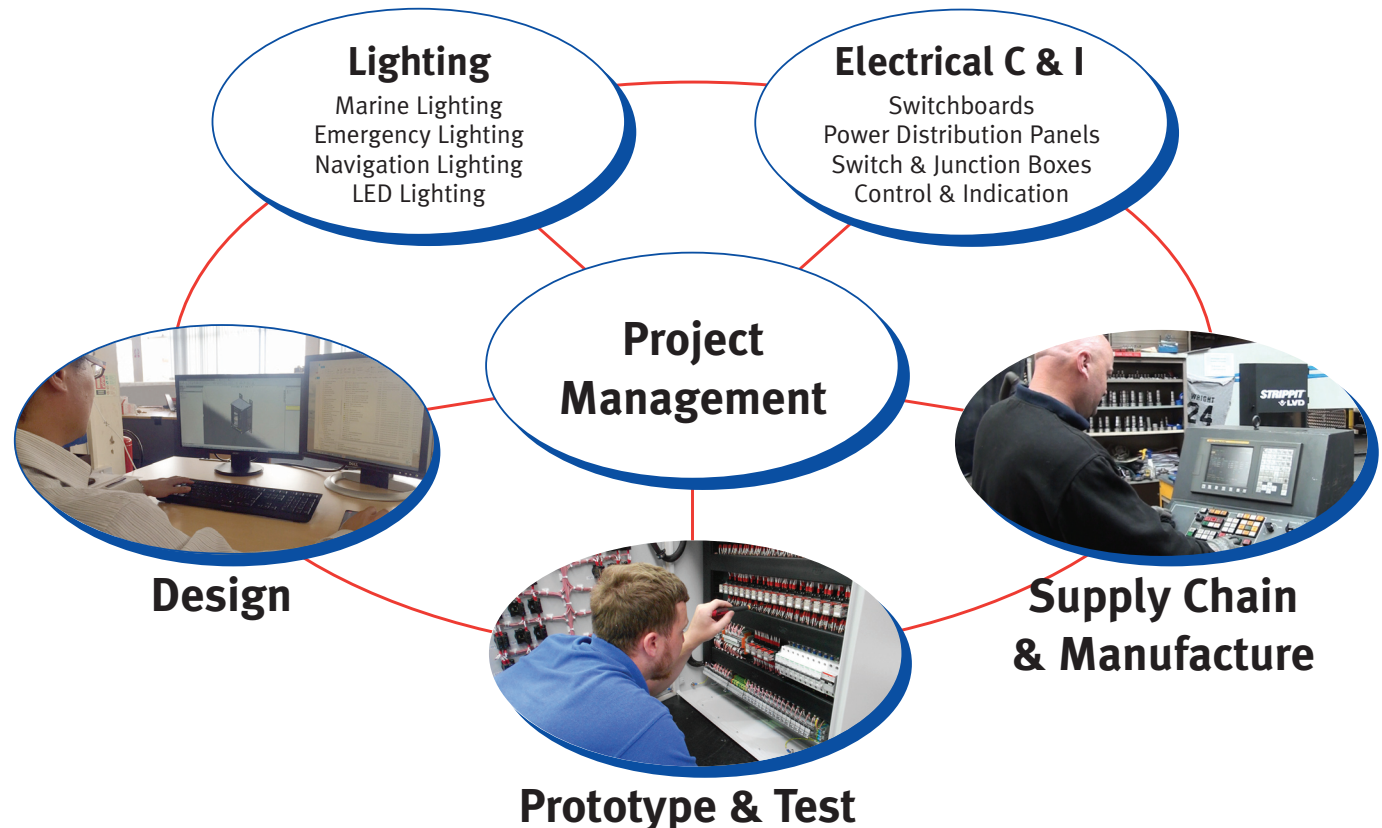

Maintenance, Repair & Overhaul Services

McGeoch's dedicated team of highly experienced engineers has been put in place to manage the most complex and demanding challenges of our maintenance, repair and overhaul activities. Our wide experience in the defence sector often involves reverse engineering obsolete military equipment and systems and providing a certificate of testing where required.

High Integrity Engineering Solutions To Exacting Standards

Over the years, McGeoch Technology has established a worldwide reputation for outstanding quality and service in the design and manufacture of high-quality electrical control and instrumentation systems and specialist lighting for both land and sea applications. Above and below the waves, our marine switchboards, switchgear, control panels and bespoke electrical equipment can be found in many of the world's naval and merchant fleets. Our extensive range of railway and hazardous area lighting is also used in a wide scope of applications.

Now, from our headquarters in central Birmingham, UK, we are able to offer our knowledge and skills in the provision of high integrity engineering solutions to a much wider field of operation.

This leaflet provides a brief introduction to our services. For further information and to discuss your requirements in detail, please call us on +44 121 687 5850 or email us at sales@mcgeoch.co.uk.
